

Bottle cap flower Instructions

Supplies

Included: bottle caps, canning lid, dowel or craft stick

Not included: pliers, hot glue or other strong glue

1. Use a pair of pliers to bend 12 of the bottle caps in half.
2. Glue a bottle cap to the center of the canning lid. This will be the center of the flower.
3. Turn two of the bent bottle caps so they are back to back to make a petal. Do this for the rest of the bottle caps. You should have 6 pairs.
4. Glue all 6 pairs of the bent bottle caps to the canning lid, around the center bottle cap.
5. Glue the dowel rod or craft stick to the back of the canning lid.
6. Allow the glue to completely dry. Then stick your flower in a flower bed or a flower pot.
