

DIY Glass Gem Pendant

Supplies

Included : wire, glass gem and necklace

Not Included: needle nose pliers, wire cutters

1. Cut 1 piece of 18 gauge jewelry wire with a length of 20" long (included)
2. Create a bend in the wire, leaving about a four inch tail on one side. This is where you will begin wrapping the wire around your glass gem.

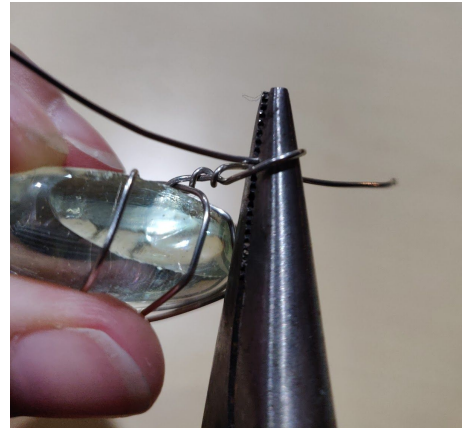

3. Wrap the wire randomly all around the gem, as shown.
 - Try to wrap the wire as snugly as possible. End the wraps at the top, where the tail sticks up from the back of the gem.

4. Twist the wires together once or twice to secure. This is most easily done by holding the gem in one hand and twisting the pair of wires with the other hand, using a pair of pliers. This should also "snug" up the wire nicely.

5. Create a loop, using a pair of pliers, for the necklace to be laced through. Make sure that the clasp of the necklace is able to go through.

6. Twist the remainder of the wire around the bottom of the loop to until the loop is secure. You might need to cut off the excess wire or you can create a spiral with the pliers like in the image below.
